SIEVES Discounts & Freight Vary With Individual SIEVES and SCREENS

Sieves are necessary for the proper preparation of slips, engobes and glazes. The mesh size is the number of open spaces per square inch. Thus, the lower number mesh sizes will let larger particle material pass through the screen than the higher number mesh sizes. Generally, slips require coarser screens (30 to 80 mesh), and glazes finer screens (80 to 150 mesh).
