

NORTHSTAR SLAB ROLLERS

The North Star Super Series Slab Rollers use a pair of cast and carefully machined 4" diameter high-strength aircraft-grade aluminum rollers and steel drive gears for the maximum compression and best slabs possible. The bushings are machined from high-strength industrial nylon and the remaining moving parts are machined steel. The roller drive features a 4.33:1 reduction gear between the large Wagon Wheel handle and the roller to ensure ease of use by every person, regardless of his/her upper body strength and weight.
